

Wood Screws

BPIR Declaration

Version: v1

Designated building product: Class 1

Declaration

GFC Fasteners has provided this declaration to satisfy the provisions of Schedule 1(d) of the Building (Building Product Information Requirements) Regulations 2022.

Product/system

Name	Wood Screws
Line	Wood screws are threaded fasteners that are used to connect two parts. Wood screws can be used in various materials, including wood, metal, and brick. (note: these screws cannot drill through metal and require a pilot hole to be pre-drilled before installation) GFC Fasteners offer a broad selection of sizes, finishes and head types that are suitable for both interior and exterior use. The dimensions and mechanical properties are based on international standard AS 3566.1
Identifier	ESWCSKTSQT17310038 RST121165N

Description

Wood screws are mainly used for secure connection of wooden materials. They work with chipboard, MDF, softwood and hardwood. There are many types of wood screws available, complete with features such as shanks to avoid wood splint, twin threads for effective drive, and tips meaning holes don't have to be pre-drilled

Scope of use

Woodscrews intended for use in residential and commercial timber construction to secure various building components

Conditions of use

Pre-drilling can prevent damage to your wood or other material from splitting or shredding, especially if the fastener is to be placed near an edge

Relevant building code clauses

B1 Structure — B1.3.1, B1.3.2, B1.3.3 (b, d, e, f, g, h, j, q), B1.3.4

B2 Durability — B2.3.1 (a)

F2 Hazardous building materials — F2.3.1

Contributions to compliance

The dimensions and mechanical properties are based on international standard AS 3566.1

Building code performance clauses

B1 Structure

B1.3.1

Buildings, building elements and sitework shall have a low probability of rupturing, becoming unstable, losing equilibrium, or collapsing during *construction* or *alteration* and throughout their lives.

B1.3.2

Buildings, building elements and sitework shall have a low probability of causing loss of amenity through undue deformation, vibratory response, degradation, or other physical characteristics throughout their lives, or during *construction* or *alteration* when the *building* is in use.

B1.3.3

Account shall be taken of all physical conditions likely to affect the stability of *buildings, building elements and sitework*, including:

- (b) imposed gravity loads arising from use
- (d) earth pressure
- (e) water and other liquids
- (f) earthquake
- (g) snow
- (h) wind
- (j) impact
- (q) time dependent effects including creep and shrinkage

B1.3.4

Due allowances shall be made for:

- a. the consequences of failure,
- b. the intended use of the *building*,

- c. effects of uncertainties resulting from *construction* activities, or the sequence in which *construction* activities occur,
- d. variation in the properties of materials and the characteristics of the site, and
- e. accuracy limitations inherent in the methods used to predict the stability of *buildings*

B2 Durability

B2.3.1

Building elements must, with only normal maintenance, continue to satisfy the performance requirements of this code for the lesser of the *specified intended life* of the *building*, if stated, or:

- (a) the life of the building, being not less than 50 years, if: those building elements (including floors, walls, and fixings) provide structural stability to the building, or those building elements are difficult to access or replace, or failure of those building elements to comply with the building code would go undetected during both normal use and maintenance of the building

F2 Hazardous building materials

F2.3.1

The quantities of gas, liquid, radiation or solid particles emitted by materials used in the *construction* of *buildings*, shall not give rise to harmful concentrations at the surface of the material where the material is exposed, or in the atmosphere of any space.
